SCIENTIFIC RATIONALE

The "Upperclass: The New Standards in Upper GI Endoscopy" congress represents a great opportunity for updating and discussing the main pathologies of the upper GI tract. The main focus will be the quality of upper GI endoscopy, with the main authors of European guidelines of the European Society of Gastrointestinal Endoscopy (ESGE) on the performance measure of upper GI endoscopy and the management of gastric precancerous conditions. Furthermore, there will be sessions regarding eosinophilic esophagitis, gastroduodenal neuroendocrine tumors, and gastric precancerous and cancerous conditions. Endoscopic capsule and double balloon enteroscopy will be discussed in a session on the small bowel. This congress will offer an opportunity for professional updating and for the implementation of clinical practice thanks to the participation of national and European experts.
